---	--	--

This video will serve as an invaluable aid for all manual therapists professionals working with those suffering from acute to chronic orthopaedic and sports injuries. Here at last is a series of simple taping techniques which will assist the clinician in their practice to reduce pain and facilitate movement reestablishment. The featured taping techniques can be easily taught and will be of immeasurable benefit to patients.

The procedures themselves are very clearly shown, being carried out by Dana Clark and Alessandro Rosatelli, both Fellows of the Canadian Academy of Manipulative Therapist. The selection is comprehensive, addressing all areas of the body, and in both the upper and lower quadrants; neural distressing techniques are also shown.

Therapeutic Taping:
Facilitating Movement and Decreasing Pain for the Upper and Lower
Quadrants
